

DannAnthonyAstillero-Lab1-Assignment-task2

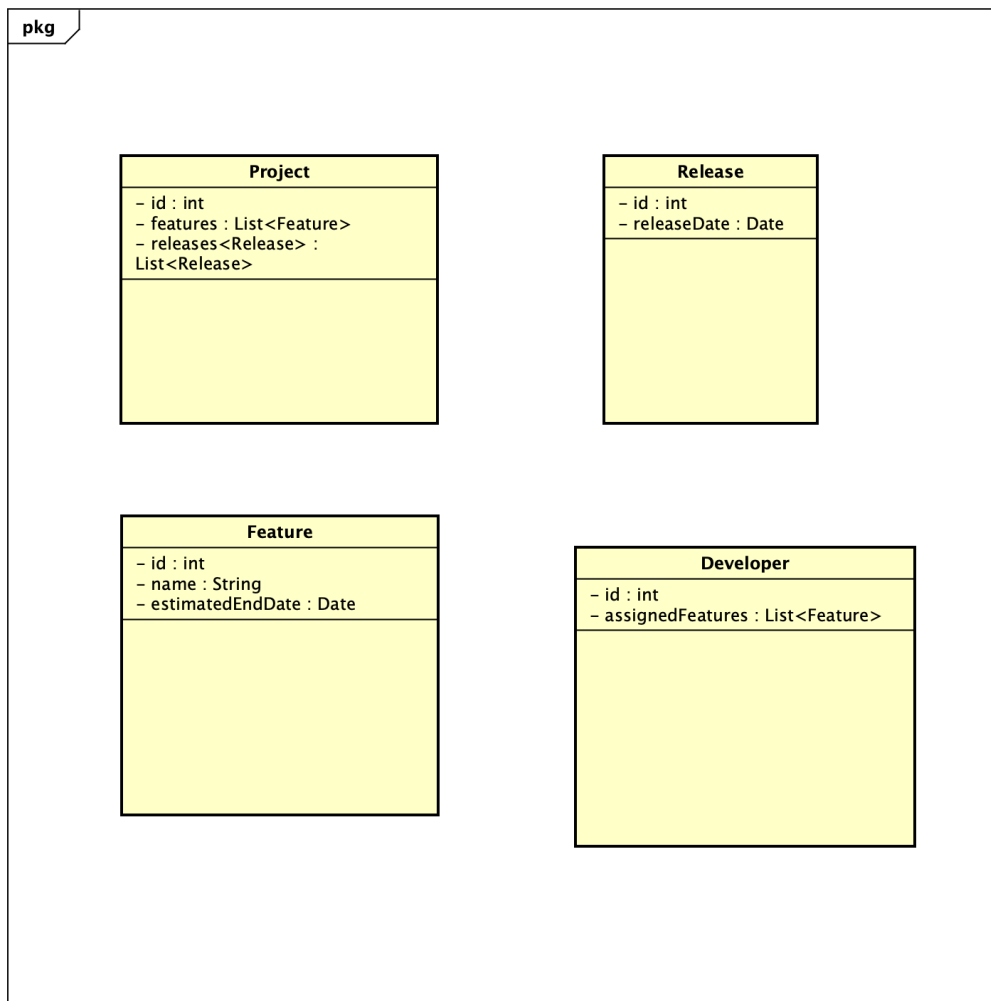

Problem 1:

User Action	System Response
User types in pin into main screen	System checks validity of PIN and presents options to user on another screen
User selects " Withdraw " from the list of options	System will redirect the user to a screen where the user can enter the amount for withdrawal
User enters the amount for withdrawal and clicks submit	System will verify if the amount for withdrawal is valid, then it will deduct money from the user's bank account and outputs the money from the ATM

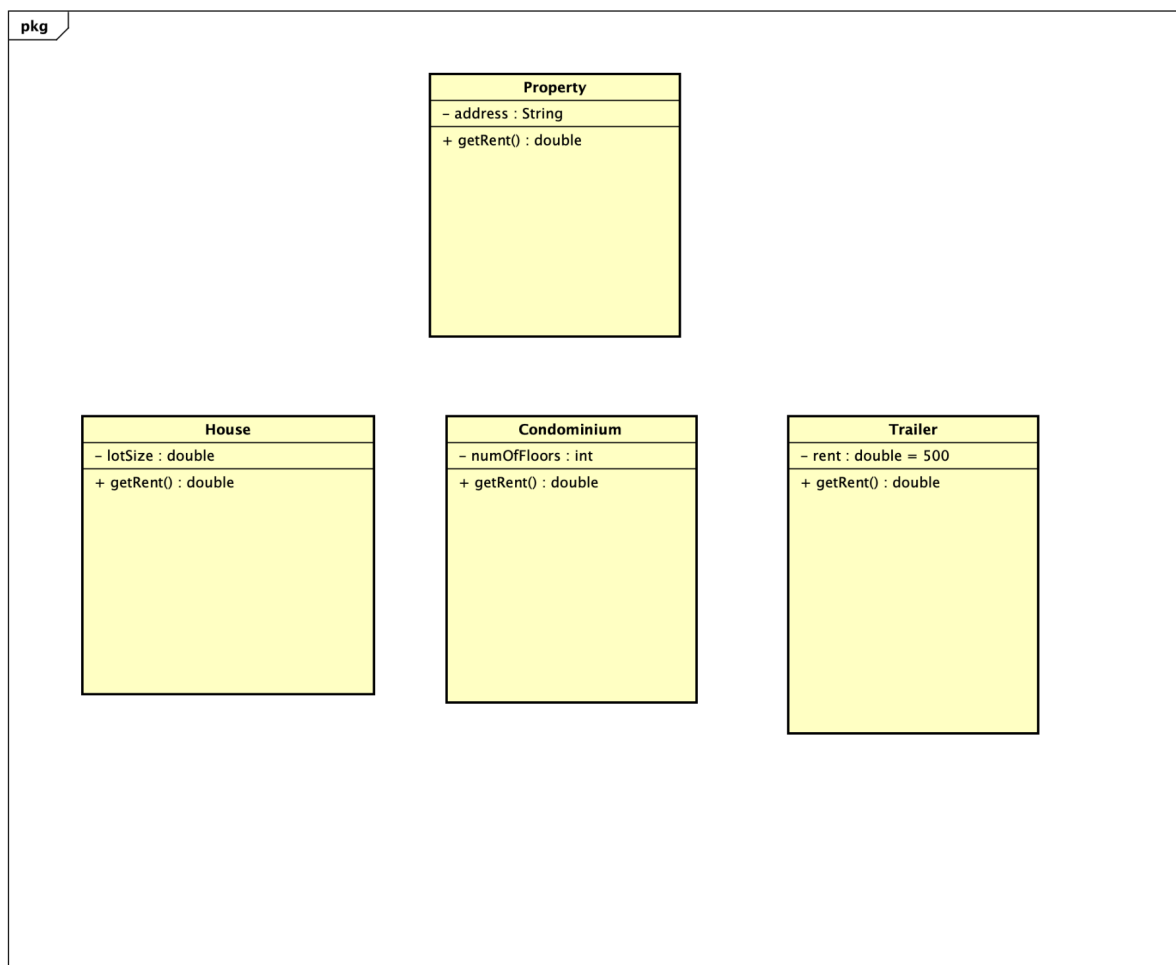

Problem 2:

Problem 3:

Problem 4:

Report:

I was able to complete all the given tasks/assignments. It took me about 5 hours to complete everything since it took me a while to find a free uml tool. The issues that I encountered was I had a hard time finding a free uml tool so I spent 1 hour browsing the net, luckily I found a uml tool called "**Astah**" which I utilised for the use case diagram and class diagram creation.
